RAC-PES

FERTILISER SPREADERS

www.seguessl.com

SEGUÉS, MORE THAN 40 YEARS IN THE MARKET

Maquinaria Agrícola Segúes, the proof of its success is to be present in the market for 40 years, with several machines adapted for all farms. Currently we adapt our fertilizer spreaders to any vehicle with the distribution system that the customer needs and even combining different systems. The RAC-PES is the fertilizer spreader that is placed on top of a truck and offers a wide variety of distribution options with auger, discs, integrated weighing systems ... and a comprehensive control of the distribution.

OPTIONS FOR THE RAC-PES

The RAC-PES is a spreader of fertilizers that is manufactured according to the needs of each user. It is the only one in the market that allows different distribution systems in the same machine, such as disks and augers, as well as an automatic system of distribution exchange. Development that was presented at FIMA 2016 and was awarded by this innovative system.

In the chassis we can integrate the weighing system with computer and GPS, to have a perfect distribution with proportional advance at the same time that we have constant information of the load that we carry. We can also incorporate a printer that gives us a ticket for the customer who knows the kg we have distributed.

We can make the spreader of fertilizers with different capacities and adapt it to any type of truck

Disc folding system in combination with augers
