PEDESTRIAN SPREADERS MINI

MAQUINARIA AGRICOLA SEGUÉS perfecting the fertilizer since 1978.

The SEGUÉS MINI pedestrian wheelbarrow-type fertiliser spreaders are the ideal solution for spreading fertilisers, salt and sand. Designed to be pushed manually, these machines stand out for their ease of use, efficiency and total autonomy.

The heart of the SEGUÉS MINI is its ingenious multiplier system on the wheel axle, which drives a highly efficient centrifugal disc. This mechanism allows the centrifugal disc that distributes the fertiliser to start up with the simple movement of the wheels.

The SEGUÉS MINI is not only designed to spread fertilisers in gardens, fields and green areas, it also becomes an essential tool for spreading salt and sand on icy pavements during the winter, guaranteeing safety on roads, pavements and access roads.

The strengths of the MINI series spreaders

- Distribution by treated steel disc and four blades
- 100% adjustable distribution system
- Simple and intuitive manual dosing regulation system
- Mechanical drive of the disc by means of the transmission located on the wheel.
- Manual opening, closing and regulation
- Working width from 0 to 4 m.

Estandard equipment:

- Small eccentric agitator at product outlet
- Deflector
- Pneumatic wheels 4.10/3.50-6
- Support foot for resting
- Rubber coated handle

TECHNICAL CHARACTERISTICS

Model	Weight	Capacity	Width	Height	Length
MINI	16 kg	30 l	600 mm	750 mm	850 mm
